Tutorial

Overview

This starter kit provides a pre-configured Node-RED application, including a Cloudant service to store the application flow configuration. Add services, generate and download the code, use the IBM Cloud Developer Tools CLI to run and debug locally, then deploy to Cloud Foundry or a DevOps Pipeline.

This starter kit will help you

- Generate an application with Node-RED
- Generate an application with files for deploying to Cloud Foundry or a DevOps Pipeline
- Connect to provisioned services

What's included?

Cloudant   View docs   View API reference
Free to start   View pricing

ASK A QUESTION

Get started

● ● Entered project details and clicked on create

● ● Clicking on the "Deploy your App" Button

- - Setting up the environment and deploying the app

- - Successfully deployed the app

- - Dragged and dropped components into the editor

- - Editing some values of the properties

- - Successfully deployed the app
